

Verification Opinion Declaration: Greenhouse Gas Emissions Statement

Project Number: 4791959414
Issue Date: April 30, 2026

To: The Stakeholders of Everforth Incorporated

In accordance with ISO 14064 Part 3: 2019, UL Solutions has verified the GHG emissions statement of Everforth, Inc. (hereinafter referred to as “Everforth”) to a limited level of assurance for the period of January 1st, 2025, to December 31st, 2025. In UL Solutions’ opinion, based on the verification activities performed, there is no evidence that the GHG emissions statement:

- is not materially correct and is not a fair representation of GHG data and information
- has not been prepared in accordance with ISO 14064 Part 1: 2018 and the GHG Protocol Corporate Standard

GHG emissions statement: January 1st, 2025, to December 31st, 2025

SCOPE	SOURCE	UNIT	QUANTITY
Scope 1	Natural gas	Metric tons CO ₂ e	17.1
Scope 2 (LBM)	Electricity (grid)		212.0
Scope 2 (MBM)	Electricity (grid, DPPA, VPPA)		215.0
Scope 3	Category 1 – Purchased Goods and Services		645.1
	Category 2 – Capital Goods		1,408.6
	Category 6 – Business Travel		6,535.8
	Category 7 – Employee Commuting		11,153.1
	Category 8 – Upstream Leased Assets		3,142.1
	Total scope 3 emissions		22,884.7

Note: Quantities are rounded to the nearest tenth. Location-based method (LBM). Market-based method (MBM). While the organizational boundary comprises 137 sites, Scope 1 and Scope 2 emissions are limited to two operational sites. The remaining sites do not have direct fuel use or electricity consumption attributable to the company.

Nature of Engagement:

UL Solutions was engaged by Everforth to perform an independent verification of the greenhouse gas (GHG) emissions statement reported by Everforth for the period of January 1st, 2025, to December 31st, 2025.

Everforth was responsible for the preparation and fair presentation of the GHG emissions statement. UL Solutions was responsible for the independent verification of Everforth's GHG emissions statement to a limited level of assurance. At the limited level of assurance, verification activities are less extensive in nature, timing, and extent than activities applied in a reasonable level of assurance.

Verification Standard and Criteria:

UL Solutions conducted the engagement in accordance with ISO 14064-3:2019 and applied the criteria set out in ISO 14064-1:2018, and the GHG Protocol Corporate Standard.

Scope:

Level of assurance and materiality threshold:

- Limited level
- The verification applied a materiality threshold of 5% for aggregate errors in sampled data

Organizational boundary:

- Global operations
- 137 sites

Consolidation approach:

- Operational control

Reporting boundary:

- See GHG emissions statement on page 1

Period of verification:

- Calendar year 2025 (January 1st, 2025, to December 31st, 2025)

Types of GHGs included:

- CO₂, CH₄, N₂O,
- GWP Version: AR4

Verification Methodology

UL Solutions applies a risk-based approach to verification that incorporates an investigation of the inherent and control risks associated with reporting. The activities performed by UL Solutions (below) were based on professional judgement.

- Conducted interviews with relevant stakeholders to understand and evaluate the data management systems, processes used for collecting and reporting on the data, and quality management of the data
- Reviewed supporting documentation and evidence
- Reviewed the processes used to gather and aggregate data
- Reviewed quality management practices
- Tested a selected sample of sites and sources for data completeness and accuracy, including a review of emission factors, unit conversions, and calculation models

**Verification Observations:**

Everforth's reported Scope 1 and Scope 2 emissions are from two leased facilities where the company has operational control. Everforth does not maintain a vehicle fleet. All remaining office space is third-party owned and operated, with Everforth generally occupying a small percentage of the total leased area as a minor tenant.

Supporting data and information for Scope 1 and 2 GHG emissions consisted of actual data for operationally controlled locations; however, within upstream leased assets data were estimated.

Supporting data and information for Scope 3 GHG emissions consisted of mainly actual data (e.g., spend) and surveys (e.g., employee commuting) although in some cases, data were estimated.

Everforth utilized publicly available industry standard calculation models, emission factors, unit conversion factors, and estimation methodologies.

Based on the verification activities performed, UL Solutions did not find evidence that the GHG emissions statement was not in accordance with the required criteria.

Independence and Impartiality:

UL Solutions is independent from Everforth and its stakeholders in reaching an impartial assurance conclusion. UL Solutions' assurance team has the relevant professional and technical knowledge, and experience to conduct assurance to the ISO 14064 standard. While other divisions of UL Solutions may provide services to Everforth, UL Solutions keeps certain activities of its divisions separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, UL Solutions has established policies and procedures to maintain the independence of the team engaged in this project and members of this team did not participate in the preparation of Everforth's reported values.
